BALLFIELD RED

Ballfield Red by Christy Minerals is a lightweight, expanded shale, processed mineral for use as a field conditioner. The combination of high absorption properties and good crushing strengths make this an outstanding material for topdressing or new field construction. Christy Minerals has been in the clay minerals processing business for over 30 years supplying to a variety of industries. We recently identified an excellent source of shale in our mines, which, when processed in our rotary kiln at optimized temperatures, produces a highly absorptive mineral with a desirable red color. We have been supplying this material locally for the past 5 years with excellent results as both an early season conditioner and as a drying agent during the season.

Our Location in the central US in High Hill, MO gives us quick access to all points by truck or rail. We package our Ballfield Red in 50lb and 100lb bags or larger 3,500lb supersacks as well as in bulk.
